

# ILMT-2026

## The 3<sup>rd</sup> ILMT Workshop

9<sup>th</sup> – 13<sup>th</sup> March 2026 @ ARIES, Nainital

The International Liquid Mirror Telescope (ILMT) is a revolutionary instrument in time-domain astronomy, designed for high-cadence observations of transient astrophysical phenomena. ILMT enables the discovery and characterization of variable celestial sources, including supernovae, quasars, and other transient events.

This workshop aims to equip researchers and students with essential skills in :

- Astronomical data pre-processing.
- Photometry and Time – Series analysis .

This enable participants to leverage ILMT's vast dataset for scientific discoveries.
